

Updating to Astro 7? [Learn how to upgrade](#)

Make your docs shine with Starlight

Everything you need to build a stellar documentation website.

Fast, accessible, and easy-to-use.

Get started →

View on GitHub 

Documentation that delights

Includes: Site navigation, search, internationalization, SEO, easy-to-read typography, code highlighting, dark mode and more.

Powered by Astro

Leverage the full power and performance of Astro. Extend Starlight with your favorite Astro integrations and libraries.

Markdown, Markdoc, and MDX

Bring your favorite markup language. Starlight gives you built-in frontmatter validation with TypeScript type-safety.

Bring your own UI components

Starlight ships as a framework-agnostic, complete docs solution. Extend with React, Vue, Svelte, Solid, and more.

What people are saying

The Astro team have EVOLVED how docs can be done and you can get it all out of the box with their Starlight project.

Rachel

[@rachelnabors](#)

Astro's official starter kit Starlight is a truly incredible tool for building a documentation website

Flavio

[@flaviocopes](#)

Starlight is our go-to example of a great DX: the speed, convenience, and attention to details is inspiring. It takes care of the tech and the looks, so you can focus on your content 🙌

StackBlitz team absolutely loves it!

Tomek

[@sulco](#)

Starlight has been a game-changer for me, allowing me to focus on content creation.

Its intuitive design not only streamlines my workflow but also reduces onboarding time for open-source developers.

Roberto

[@RmeetsH](#)

Spent some more time with Starlight for the Course Builder docs and it's been great so far. Lots of nice touches and can focus on writing in Markdown and not fiddling with the site.

Joel

[@jhooks](#)

Started playing with Starlight. Gotta say I'm very impressed with the performance out of the box.

100 100 100 100

Rick

Starlight is the best way to get started with documentation, between the power and speed of Astro, and the tooling from Starlight, it's a match in heaven.

It has been my go to for a while now, and I keep on loving it!

Nicolas

[@beaussan](#)

I used Starlight in my last job and loved it. Great components, intuitive design, and super-responsive community (whenever anyone needed something, they'd ship it soonish or tell you a workaround). Very pleasant experience.

Sylwia

[@SylwiaVargas](#)

The docs on my monorepo site look better than ever thanks to Starlight. It's extremely easy to use without losing all the power of Astro. Thank you for working on it!

Lou Cyx

[@loucyx](#)

Starlight is my go-to tool for documentation. It made it super easy to add docs to my existing Astro product website, vs needing a subdomain to use with another tool.

BowTiedWebReaper

[@BowTiedWebReapr](#)

I've been rebuilding the WPEngine Atlas Platform docs. Trust me when I say Starlight has everything you need to make an A+ docs platform 🙌

Jeff

[@J_Everhart383](#)

Give Starlight a try!

I use it for a few of my sites and it's great.
