

Overview

Welcome to **Starlyt Docs**, a documentation site built from ordinary Markdown. Read the [long guide](#) or explore the [code examples](#).

Getting started

Choose a topic in the sidebar. This overview uses *emphasis*, **strong text**, and literal inline code such as `<article>`.

- Install the theme.
- Configure ordered navigation.
- Write Markdown and publish your site.

Documentation workflow

1. Make a small, reviewable change.
2. Build the site locally.
3. Check the rendered result before publishing.

Good documentation explains what a reader can do, not just how the software is arranged.

Using `config.json`

Configuration is ordinary data. Keep the content separate from the theme.

A small diagram

Printable interactive content

The [external print destination](https://example.test/print-target?mode=complete) (<https://example.test/print-target?mode=complete>) prints its URL. [Internal navigation](#), the [page fragment](#), [email](#), and [telephone](#) links do not add destination suffixes.

First print panel

The first printable tab panel remains visible.

Second print panel

The hidden printable tab panel is also complete.

A file explorer view showing a directory structure. At the top level is a folder icon labeled 'src'. Below it, there are two files: a CSS file labeled '# print.css' and a text file labeled '≡ complete-output.txt'.
